

New Integrated Acute Services Building for Randwick

The NSW Government is partnering with UNSW Sydney to deliver the Integrated Acute Services Building (ASB); the first stage of the Randwick Campus Redevelopment and the catalyst project for expanding the world-class health, research and education facilities at the Randwick precinct.

Integrated Acute Services Building, view from Botany Street. Opening 2022.

Features of the Integrated Acute Services Building

The new Integrated ASB includes:

- Expanded adult Emergency Department
- Expanded Intensive Care Unit
- Four new digital operating theatres equipped with state-of-the-art technology for neuro-surgery and complex orthopaedics, including major spinal surgery
- A new and expanded Central Sterilising Services Department and a new helipad serving the Randwick Hospitals Campus
- Research, education and training spaces, including additional spaces funded by UNSW Sydney, to enable clinical innovation and research, biomedical engineering, and clinical translational research laboratories collocated directly alongside clinical staff providing acute healthcare services
- Expanded Psychiatric Emergency Care Centre
- New Medical Assessment Unit including a Virtual Care Centre
- Replacement of existing inpatient wards and provision of additional inpatient beds providing contemporary facilities for the following specialties:
 - ◇ Haematology and Oncology
 - ◇ Aged Care (Acute and Sub Acute)
 - ◇ Orthogeriatrics
 - ◇ Respiratory Medicine and Infectious Diseases
 - ◇ Acute Spinal Unit
 - ◇ Neurosciences floor that will incorporate an expanded Acute Stroke Unit, Neurology and Neurosurgical beds and the Complex Epilepsy Service.

What is the Integrated ASB?

The Integrated ASB is the first major upgrade to the Prince of Wales Hospital in 25 years, delivering state-of-the-art infrastructure that will support new and innovative approaches to acute healthcare and provide staff with purpose-designed and built facilities that support contemporary clinical practice.

Health-related academic and translational research spaces will be colocated with clinical services. These include laboratories and spaces to support collaboration and the testing and trialing of new models of care and innovative treatments.

Partnering to create opportunities

The Randwick Hospitals Campus has had teaching affiliations with UNSW Sydney for nearly 60 years. The Integrated ASB leverages this long-standing partnership by providing a physical and working integration between the Hospital and UNSW.

The new building embeds research, education and training initiatives with clinical activities and strengthens links between clinicians and researchers, providing important insights into current healthcare practice that will lead to learning and advancement in the way healthcare is delivered.

This will help position the Randwick Health and Education Precinct at the forefront of health research and education internationally, attract and retain outstanding clinicians, health professionals and academics, drive better healthcare outcomes for patients and generate economic benefits for the community.

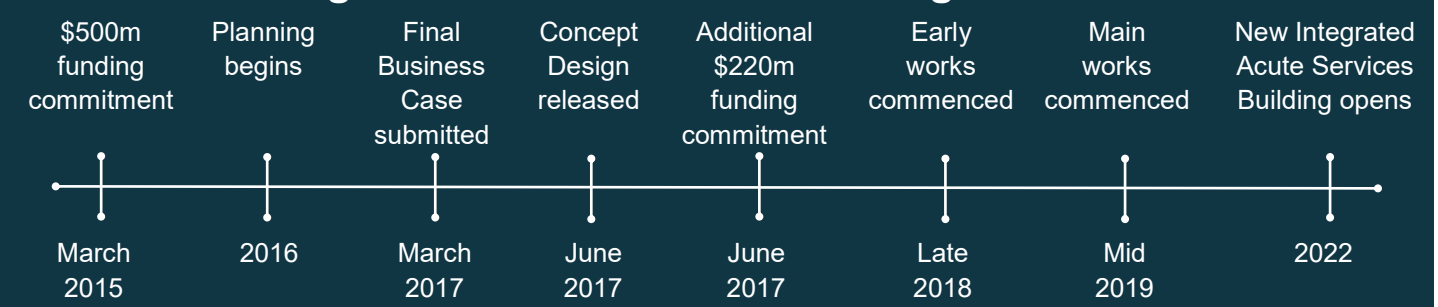

Enhancing the patient experience

The new and expanded facilities, together with innovative approaches to clinical services, place the patient experience at the centre of healthcare delivery by:

- Improving services and technology to deliver contemporary models of care
- Integrating health services with education and research to foster a culture of discovery and innovation and a rapid translation of research results to bedside care
- Fostering calm through enhanced connectivity and intuitive wayfinding that helps patients reach their destination and access the required health services
- Promoting wellbeing by providing safe, green and open public spaces that connect with internal areas.

Planning the Integrated ASB

Health and urban master planning are important for considering the new hospital in the context of the broader community, so that the needs of our changing city can be accommodated now and into the future. This approach has informed all stages of planning for the new hospital building.

The project has finalised the Detailed Design phase and is undertaking the change and commissioning planning process to prepare to care for patients when the new Acute Services Building opens in 2022.

Staff, clinicians, health consumers and the community have played a key role in the design and planning process, helping deliver new hospital facilities and services that respond to the needs of patients, carers, families, local residents and the broader community.

Where are we up to now?

Site preparation and early works are now complete and construction to prepare the foundations for the main building commenced in mid 2019.

Works required to enable the extension of the Integrated ASB across Hospital Road as well as future-proof construction of the broader Randwick Campus Redevelopment began in late 2019.

Delivering the Project

The NSW Government is investing up to \$780 million to upgrade the Prince of Wales Hospital. This investment includes UNSW Sydney's commitment to funding additional research, education and training facilities.

We are focused on delivering world leading health infrastructure that responds to the increasingly complex and evolving needs of our community now and into the future.

Health Infrastructure continues to work closely with the South Eastern Sydney Local Health District, Sydney Children's Hospitals Network, Randwick Campus Redevelopment Consumer and Community Advisory Committee, UNSW Sydney, Randwick City Council and across NSW Government to plan and deliver the Randwick Campus Redevelopment.

The Integrated ASB is part of our growing focus on embedding academic rigour in the daily health and wellbeing interactions we have with patients. These interactions give us important insights into current healthcare delivery while providing the opportunity to learn and improve models of care going forward.

Strengthening the Randwick Health and Education Precinct

The new Integrated ASB is an opportunity to define the long-term direction for the expanded Randwick Health and Education Precinct, revitalise public domain and improve accessibility. Significant planning between Precinct partners has informed a new building that enables closer collaboration with UNSW and strengthens the health, research and education presence at Randwick.

Accessibility and public domain

The design for the Integrated ASB has also considered how the new building will relate to surrounding public spaces and infrastructure, including the Randwick Hospitals Campus, UNSW, South East Light Rail and nearby retail precincts.

New design features and changes to traffic conditions that will enhance the local built environment as well as improve accessibility include:

- A new 'hospital square' with pedestrian and vehicle access from Botany Street and a new public drop-off
- Art and culture program
- Green outdoor spaces, including internal and external courtyards
- Improvements to road and pedestrian infrastructure on Magill and Botany Streets
- Lowering of a section of Hospital Road and closure to through traffic from High Street
- Opening of Magill Street between 7am and 10pm
- Emergency Department access, patient parking and drop-off from Magill Street.

These features will also support the next phase of development to the north of the Integrated ASB, including the Sydney Children's Hospital Stage 1 and Children's Comprehensive Cancer Centre as well as the UNSW Health Translation Hub.

Partnering with the community

Community partnerships in planning the Randwick Campus Redevelopment are essential so that we can deliver new hospital facilities and services that respond to the needs of patients, carers, families, local residents and the community.

Consumers and community are a key part of the design and planning process, and we have an active group co-designing health services and facilities with the project team. If you would like to join our team please call us on 1800 571 866.

Community engagement has been a core element in the planning and design of the new Integrated Acute Services Building. As we enter the commissioning phase, I look forward to leading our dedicated Committee in ongoing, meaningful collaboration with the project team and partners to ensure community input continues to inform the delivery of patient and community-focused health services and facilities.

Deb Verran, Chair
Consumer and Community Advisory Committee
