

A new hospital for Randwick

The NSW Government is investing \$720m to deliver a new Acute Services Building for Prince of Wales Hospital. The first stage is a catalyst project to deliver on the vision of building a world-class health, research and education precinct delivering cutting-edge, compassionate and holistic healthcare and wellness programs to the local community and other residents of NSW.

Features of the new Acute Services Building

Indicative masterplan May 2018

The new Acute Services Building for Prince of Wales Hospital includes:

- A new Emergency Department
- A Psychiatric Emergency Care Centre (P.E.C.C.)
- An expanded Intensive Care Unit
- A new rapid assessment unit including a Virtual Care Centre
- Contemporary inpatient units (IPUs) that will replace aging infrastructure
- New operating theatres for the Randwick Hospitals' Campus
- A new helipad shared with Prince of Wales Hospital, the Royal Hospital for Women and Sydney Children's Hospital, Randwick
- Support for translational research with capacity for health related education and research integration at the bedside
- New models of care that support integrated care for the community are also being implemented.

Planning your hospital

Planning has been underway since 2015. A robust planning framework has been developed for the project, with significant focus applied to health and urban master planning.

Health and urban master planning are important for considering the new hospital in the context of the broader community, so that the needs of our changing city can be accommodated now and into the future.

Prince of Wales Hospital Staff

Why is the Redevelopment needed?

The NSW Government has committed funding for the redevelopment in recognition of the need to improve patient outcomes by delivering efficiencies across the existing Randwick Hospitals' Campus, improve aging infrastructure and address the changing models of healthcare to meet future growth, adapt to new technology and demand.

Existing campus facilities are ageing and inefficient, over 60 per cent of buildings on Campus are over 30 years old and this is impacting on the quality and cost of health service delivery and patient care.

The Prince of Wales Hospital is now operating close to capacity, without investment and the capacity to expand in the future, the hospital will be unable to meet growing demand and waiting times will increase.

Where are we up to now?

The project has recently finalised the schematic design phase. The Schematic Design phase aims to take the definition of the building and services to the next level of detail, providing clinicians, staff, and other stakeholders with a greater level of understanding of what the new hospital will look like, and how it will work. Schematic Design is 'department focused' and includes plans for how rooms and services will relate to each other within a defined service.

Detailed Design

The detailed design phase will follow Schematic Design and will provide many new opportunities for community members to get involved in the planning process and the interior design of the spaces.

Detailed Design phase confirms specific ward and room layouts. It also includes the development of the final façade of the building and a complete list of technology, fixtures, furnishings and equipment.

Enhancing the patient experience

By expanding and delivering contemporary infrastructure, together with implementing new approaches to clinical services, the patient experience will be at the forefront of contemporary health care. The new Acute Services Building delivers a number of opportunities to improve health care for our community, including:

- Improving services and technology to deliver contemporary models of care.
- Integrated health services with education and research to foster a culture of discovery and innovation and a rapid translation of research results to bedside care.
- Improved connectivity and intuitive wayfinding to support public and logistics movements.

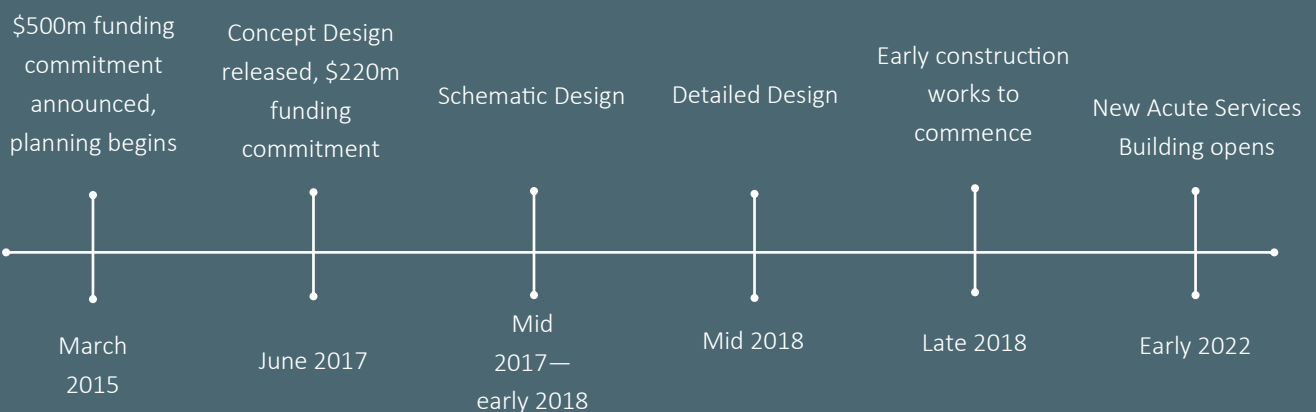

Accessibility and public domain

We see this first stage as an opportunity to define the long-term direction for the new Randwick Health and Education Precinct, revitalise public domain and improve accessibility.

The design for the new Acute Services Building is being considered in context of how the new building will relate to surrounding public spaces and infrastructure, including the Randwick Hospitals Campus, UNSW, South East Light Rail and nearby retail precincts. New design features that will enhance the local built environment include:

- A new 'hospital square' with pedestrian and vehicle access from Botany Street and a new public drop-off area.
- Green outdoor spaces, including internal and external courtyards.
- Improvements to Magill Street and Botany Street road and pedestrian infrastructure.
- Emergency Department access, patient parking and drop-off from Magill Street.
- Opening Magill Street to allow vehicle access to Hospital Road and the Randwick Hospitals' Campus car park.

Randwick Campus Redevelopment planning timeline

Delivering the project

The first commitment of funds to planning the new hospital was in 2015. Planning, designing and building a hospital takes time and our focus is on keeping pace with demand and delivering the best health outcomes for our patients and the broader community. Early works are expected to commence in the latter half of 2018, with the new Acute Services Building expected to open in late 2022.

Health Infrastructure is working closely with the South Eastern Sydney Local Health District (SESLHD), Sydney Children's Hospitals Network (SCHN), Randwick Campus Redevelopment Consumer and Community Advisory Committee, UNSW, Randwick City Council and across NSW Government to plan the redevelopment.

The \$720m Randwick Campus Redevelopment project is fully funded by the NSW Government.

Partnering with community

Community partnerships in planning for the Randwick Campus Redevelopment are essential so that we can deliver a new hospital that responds to the needs of patients, carers, families, local residents and the community.

Consumers and community are a key part of the design and planning process, and we have an active group co-designing health services and facilities with the project team. If you would like to join our team please call us on 1800 571 866.

The community's voice is essential in the design of health services. I am deeply honoured, as a member of the community, to lead a team that is partnering with Government and staff to shape an innovative, community-focused future for health at Randwick.

Bob Wilson, Chair

Consumer and Community Advisory Committee
