

PUBLIC DOMAIN REFERENCE GROUPS

The Randwick Campus Redevelopment team are hosting focus groups with staff, students, consumers and the community to seek their input to the design of five key public facing areas of the new Prince of Wales Hospital Acute Services Building.

The working groups will cover the following public domain areas:

- interior design
- landscape design
- retail spaces
- wayfinding
- art and culture

The consumer and community voice is critical in the planning and design of the new Prince of Wales Acute Services Building to ensure the project's success in delivering truly community-focused public infrastructure. The intention is to unify the public domain to ensure all areas harmonise together.

The Randwick Campus Redevelopment team is committed to working together with the community to improve the patient experience at Randwick and design an efficient, sustainable, future ready hospital.

Interior Design

The Prince of Wales Acute Services Building will be a holistic healing environment using human centred design which promotes health and wellness by being warm, inviting and harmonious. The interior design strategy is focused on creating a positive healthcare experience where patients feel safe, informed, reassured and cared for, and to provide a supportive and high quality work environment for staff.

Art & Culture

The art and culture strategy will explore and define how art can help deliver exciting, welcoming and dynamic spaces in the new hospital for patients, carers, staff and the community. Beautiful artistic spaces also help with wayfinding and ensure indoor and outdoor spaces compliment health service delivery.

Landscaping

The Acute Services Building and future stages of Randwick Campus Redevelopment provide an opportunity to significantly revitalise the area. The landscape strategy guides the redevelopment to contribute to an urban environment that is green and healthy, connected, integrated and responsive. These principles are informing the design of public open spaces and landscaping in and around the new Acute Services Building to create a contemporary Hospitals' Campus.

Wayfinding

The aim is to create a distinctive, coherent and trusted wayfinding solution that is integrated into open community spaces, pedestrian, vehicular and transport modes. Wayfinding supports all people that are arriving, leaving or circulating throughout the whole Randwick Hospital Campus, allowing them to quickly identify the route to their destination. The strategy will identify a clear, easily understood hierarchy of signage elements and communication touchpoints. Wayfinding is key to ensuring patients can have a smooth transition to their health service and a calm hospital experience.

Retail Spaces

The approach to retail facilities of the Acute Services Building considers the needs of hospital users and the broader precinct. It needs to provide a dynamic and contemporary canvas that can be constantly refreshed to contribute to a welcoming and vibrant main hospital entry. The retail facilities that will be designed will facilitate easy and effective access to a variety of services available.
